Document Type	Statement of Purpose for Summer School Admission
Overall Risk	MEDIUM
Total Clauses Found	7
High Risk Clauses	0
Medium Risk Clauses	2
Low Risk Clauses	5

Document Summary

Pulkit Kher's Statement of Purpose for the Amazon ML Summer School 2026 details his extensive self-taught journey in AI/ML, from foundational skills to advanced topics like deep learning, NLP, transformers, and RAG systems, exemplified by several personal projects. He highlights his current AI/ML internship at Tishitu, where he is building an identity verification system, emphasizing real-world production experience. Pulkit expresses a clear motivation to deepen his theoretical understanding in advanced ML concepts, aligning his learning objectives with the program's rigorous nature.

MEDIUM RISK CLAUSES (2)

1. Advanced AI Project & RAG System Claim

Original Text: The transformer architecture marked a big turning point... This led to my Document Reader project (github.com/pulkitKher/document-reader-rag) — a RAG-based question-answering system using FAISS for vector search and a Flask frontend, capable of handling 50+ page documents with sub-3 second query res...

Explanation: The applicant describes building a sophisticated AI project using modern techniques like RAG (Retrieval-Augmented Generation) and transformer architectures, highlighting its capability to process large documents quickly.

Recommendation: Ensure that the performance claims (50+ pages, sub-3 second response) are absolutely accurate and verifiable. Any exaggeration could raise doubts about the applicant's credibility and impact the evaluation negatively.

2. Current Internship Experience and Performance Claims

Original Text: Currently, I am working as an AI/ML intern at Tishitu (tishitu.org), where I am building a real-world identity verification system... developed FastAPI-based REST APIs that support real-time document verification with under 2 seconds of response time, achieving 95%+ OCR accuracy. This internship has...

Explanation: This outlines the applicant's current professional experience, describing significant contributions to a real-world AI project, including specific performance metrics for the developed APIs.

Recommendation: All claims regarding response times, OCR accuracy, and specific contributions at the internship must be absolutely factual and verifiable. Inaccurate or inflated claims about professional experience or performance metrics could severely damage the applicant's reputation and future academic/professional prospects.

LOW RISK CLAUSES (5)

1. Foundational Skill Declaration

Original Text: My journey into AI and machine learning started with a simple question: how do machines actually learn from data? That curiosity made me start from scratch, beginning with Python and building a strong foundation in data manipulation with Pandas and visualization using Matplotlib and Seaborn.

Explanation: This section explains the applicant's initial motivation and the fundamental programming and data handling skills they acquired early in their machine learning journey.

Recommendation: As a student applying, ensure that these foundational skills can be readily demonstrated through code or discussion if requested by the admissions committee, maintaining transparency.

2. Project Experience Declaration (Student Marks Predictor)

Original Text: With that foundation, I built my first end-to-end machine learning project — a Student Marks Predictor — following a complete production pipeline: data ingestion, preprocessing, transformation, model training, evaluation, and finally serialization using pickle for deployment. I deployed this on Hugg...

Explanation: The applicant describes completing a full machine learning project, from data processing to model deployment, and hosting it online. This shows practical application of learned concepts.

Recommendation: It is advisable to keep the linked GitHub repository and deployed project active and well-maintained, as reviewers may check its functionality and code quality for verification.

3. Deep Learning & NLP Skill Advancement

Original Text: Next, I moved into deep learning. I studied artificial neural networks and applied them in a Churn Classification project (github.com/pulkitKher/churn-classification)... From there, I expanded into natural language processing, implementing Word2Vec, CBOW, and Skip-gram models, and then into sequenti...

Explanation: This part details the applicant's progression into more advanced machine learning fields like deep learning and natural language processing, showcasing practical implementation of complex models and architectures.

Recommendation: Be prepared to discuss the specific challenges encountered and solutions implemented in these advanced projects, showing a deep understanding beyond just theoretical knowledge, which strengthens the application.

4. Stated Learning Objectives and Program Alignment

Original Text: The gaps I want to address are clear: I have strong applied intuition but want deeper theoretical knowledge in optimization theory, probabilistic graphical models, and the mathematics behind large-scale ML systems. The Amazon ML Summer School is exactly the environment I need — rigorous, research-fo...

Explanation: The applicant clearly states their specific academic goals for wanting to join the program, emphasizing a desire for deeper theoretical knowledge in advanced ML topics, and how the program perfectly matches these needs.

Recommendation: This section is well-articulated, showing genuine interest and fit. Maintain this consistent message if invited for an interview or further discussion to reinforce the alignment.

5. Applicant's Value Proposition and Motivation

Original Text: I bring to MLSS a proven ability to move from concept to deployment, a genuine curiosity that has driven my self-directed learning across the entire ML stack, and an active internship that keeps me grounded in real-world challenges. I am not applying for exposure to ML — I am applying to understand ...

Explanation: This concluding statement summarizes the applicant's key strengths and reiterates a strong, well-defined motivation for applying to the program, emphasizing a desire for profound understanding over mere exposure.

Recommendation: Continue to articulate this clear sense of purpose and demonstrate the 'proven ability' and 'genuine curiosity' throughout the application process, as this strengthens the overall narrative.
